Note: Daily numbers may show a discrepancy when performing basic addition. This is based on the fact that the County is performing ongoing investigation into cases and updating their daily case numbers but not updating historic case numbers

COVID-19 Los Angeles County Total New Cases
As of August 24, 2020, 12:00 PM
Key Takeaways
Yesterday saw a case increase of 0.5%. The past seven days have seen an average daily case increase of 0.6%.
Key Takeaways:
As of 8/21, the 14-Day Case rate per 100K residents (by lab date, with prison cases) was 236 based on available data.

The official CA count (as of 8/21) is 204.8 excluding prison cases based on episode date.

Note: The case rate was calculated by taking the case data per 100K residents by reporting date from the Los Angeles County Department of Public Health over the a 14-day period with a 3-day lag (e.g. the data for 8/6 run from 7/21-8/3). The main data shown for this report do not exclude prison cases though the difference is about 1 person per 100K.

The State waiver qualifying metric is defined as: “14 day case rate (without prison cases) - The total number of cases diagnosed and reported over a 14-day period divided by the number of people living in the county. This number is then multiplied by 100,000. Due to reporting delay, there is a 3-day lag. Although case rates are often calculated using the date they were reported to the health department, this measure uses the episode date. The episode date is the earliest of several dates and corresponds to the earliest date that the case can be known to have had the infection.”
