Key Takeaways:
Los Angeles County currently has a 2.6% mortality rate. The estimated infection rate is 0.94 (ideal is <1.0)

New cases number for 7/23 does not include certain cases due to a data backlog from certain labs.
Key Takeaways:
The past seven days have seen an average daily increase of 2,812 new cases.

The past seven days have seen an average daily increase of 40 new deaths.

Source: Los Angeles County Department of Public Health

Note: Between July 3-5, the County took their systems offline for an upgrade. Additionally, several testing sites were closed and at least one major lab did not report case results. Deaths were likely undercounted because the necessary verification steps extended beyond the weekend due to holiday. As a result, all data during this time period is skewed.
