COVID-19 • CITY + COUNTY + STATE VIEW

New & Total Cases
Key Takeaways:
• 7,085 new cases reported in CA since yesterday (1.2% increase)

• LA County has 36.43% of cases in CA with 1,999 new cases (0.9% increase)

• The City of LA has 14.82% of cases in CA with 723 new cases (0.8% increase)
Key Takeaways:
The past seven days have seen an average daily increase of 2,191 new cases.

Note: Daily numbers may show a discrepancy when performing basic addition. This is based on the fact that the County is performing ongoing investigation into cases and updating their daily case numbers but not updating historic case numbers.

Source: Los Angeles County Department of Public Health

Note: New cases numbers since 7/23 are affected by data backlogs from certain labs, which can cause under-reporting on certain days, followed by over-reporting once results are received.

Prepared by Mayor’s Innovation Team
Key Takeaways
Yesterday saw a case increase of 0.9%. The past seven days have seen an average daily case increase of 1.0%

Source: Los Angeles County Department of Public Health

Note: New cases numbers since 7/23 are affected by data backlogs from certain labs, which can cause under-reporting on certain days, followed by over-reporting once results are received.
Key Takeaways:
As of 8/10, the 14-Day Case rate per 100K residents (by episode date, with prison cases) was 328 based on available data. However, due to data issues beginning 7/23, the rate is more likely 330-360.

Note: The case rate was calculated by taking the case data per 100K residents by episode date from the Los Angeles County Department of Public Health over the a 14-day period with a 3-day lag (e.g. the data for 8/6 run from 7/21-8/3). The main data shown for this report do not exclude prison cases though the difference is about 1 point.

The State waiver qualifying metric is defined as: “14 day case rate (without prison cases) - The total number of cases diagnosed and reported over a 14-day period divided by the number of people living in the county. This number is then multiplied by 100,000. Due to reporting delay, there is a 3-day lag. Although case rates are often calculated using the date they were reported to the health department, this measure uses the episode date. The episode date is the earliest of several dates and corresponds to the earliest date that the case can be known to have had the infection.”

Source: Los Angeles County Department of Public Health
Prepared by Mayor’s Innovation Team

Note: It is expected that Los Angeles County has an actual case rate of 350-360 as of 8/10. However, due to CDPH system issues beginning around 7/23, the number of new cases are assumed to be under-reported. Once State data issues are resolved, the case number and case rate numbers will be adjusted as best as reasonably possible.
COVID-19 • LOS ANGELES COUNTY

New & Total Deaths
Key Takeaways:

- **160** new deaths reported in CA from 8/12 to 8/13 (1.5% increase)

- LA County has **47.8%** of deaths in CA with **62** new deaths from 8/12 to 8/13 (1.2% increase)

Note: Between July 3-5, the County took their systems offline for an upgrade. Additionally, several testing sites were closed and at least one major lab did not report case results. Deaths were likely undercounted because the necessary verification steps extended beyond the weekend due to holiday. As a result, all data during this time period is skewed.

Key Takeaways:
Since their respective minimums in late May:

LA County’s positive rate has increased 1.9 percentage points to 9.9%

LA City’s positive rate has increased 2.8 percentage points to 7.2%

Source: Los Angeles County Department of Public Health. Recent dates are incomplete due to lags in reporting. Persons Tested are derived from Electronic Lab Reporting (ELR) data. Positive Persons will not equal total cases because not all laboratories report results through ELR.
Key Takeaways:
- **At least 1,120,199 tests** have been performed at City of Los Angeles since 3/20

- **In LA County overall, at least 1,984,394 tests** have been performed since 3/20

- **At least 15,710 tests** were performed on 8/12

- **75,298** of the 1,066,317 people for which results were received were positive (7.18%)

- **NOTE**: Several testing sites were closed over the July 4th holiday weekend
