Share of LA County Deaths by Race
As of August 16, 2020 • Two day lag
Key Takeaways:
• 4,636 new cases reported in CA since yesterday (0.7% increase)
• LA County has 32.81% of cases in CA with 1,003 new cases (0.4% increase)
• The City of LA has 13.31% of cases in CA with 262 new cases (0.3% increase)

Source: Los Angeles County Department of Public Health, Johns Hopkins Center for Systems Science and Engineering GitHub repo, LA County Department of Public Health, COVIDTracking.com, and the LA Times. Day of outbreak is identified as March 11th, with prior cases aggregated to day 1

Prepared by Mayor’s Innovation Team
Key Takeaways:
The past seven days have seen an average daily increase of 1,793 new cases

Note: Daily numbers may show a discrepancy when performing basic addition. This is based on the fact that the County is performing ongoing investigation into cases and updating their daily case numbers but not updating historic case numbers.
Key Takeaways
Yesterday saw a case increase of 0.4%. The past seven days have seen an average daily case increase of 0.8%.
Key Takeaways:
As of 8/15, the 14-Day Case rate per 100K residents (by episode date, with prison cases) was 295 based on available data. However, due to data issues beginning 7/23, the rate is more likely 290-320.

Note: The case rate was calculated by taking the case data per 100K residents by reporting date from the Los Angeles County Department of Public Health over the a 14-day period with a 3-day lag (e.g. the data for 8/6 run from 7/21-8/3. The main data shown for this report do not exclude prison cases though the difference is about 1 person per 100K.

The State waiver qualifying metric is defined as: “14 day case rate (without prison cases) - The total number of cases diagnosed and reported over a 14-day period divided by the number of people living in the county. This number is then multiplied by 100,000. Due to reporting delay, there is a 3-day lag. Although case rates are often calculated using the date they were reported to the health department, this measure uses the episode date. The episode date is the earliest of several dates and corresponds to the earliest date that the case can be known to have had the infection.”

Source: Los Angeles County Department of Public Health
Prepared by Mayor’s Innovation Team

Note: It is expected that Los Angeles County has an actual case rate of 290-320 as of 8/15. However, due to CDPH system issues beginning around 7/23, the number of new cases are assumed to be under-reported. Once State data issues are resolved, the case number and case rate numbers will be adjusted as best as reasonably possible.
