Key Takeaways:
- 4,480 new cases reported in CA since yesterday (0.7% increase)
- LA County has 34.73% of cases in CA with 989 new cases (0.4% increase)
- The City of LA has 14.07% of cases in CA with 321 new cases (0.3% increase)

Source: Los Angeles County Department of Public Health, Johns Hopkins Center for Systems Science and Engineering GitHub repo, LA County Department of Public Health, COVIDTracking.com, and the LA Times. Day of outbreak is identified as March 11th, with prior cases aggregated to day 1

Prepared by Mayor’s Innovation Team
Key Takeaways:
The past seven days have seen an average daily increase of 1,464 new cases.

Note: Daily numbers may show a discrepancy when performing basic addition. This is based on the fact that the County is performing ongoing investigation into cases and updating their daily case numbers but not updating historic case numbers.
Key Takeaways
Yesterday saw a case increase of 0.4%. The past seven days have seen an average daily case increase of 0.6%.
Key Takeaways:
As of 8/25, the official State case rate is 197.5.

The State waiver qualifying metric is defined as: “14 day case rate (without prison cases) - The total number of cases diagnosed and reported over a 14-day period divided by the number of people living in the county. This number is then multiplied by 100,000. Due to reporting delay, there is a 3-day lag. Although case rates are often calculated using the date they were reported to the health department, this measure uses the episode date. The episode date is the earliest of several dates and corresponds to the earliest date that the case can be known to have had the infection.”

Starting 8/24, the data show the official state number. Prior to 8/24, an estimate was created using data from the County of Los Angeles’ Surveillance dashboard, which show 14-day cases per 100K residents by episode date, in accordance with the state definition for Los Angeles County. These data do not include Pasadena and Long Beach.

Note: Between July 3-5, the County took their systems offline for an upgrade. Additionally, several testing sites were closed and at least one major lab did not report case results. Deaths were likely undercounted because the necessary verification steps extended beyond the weekend due to holiday. As a result, all data during this time period is skewed.
