COVID-19 DATA SUMMARY

Data Snapshot
Explanation of metrics from the California Department of Public Health

*New COVID-19 positive cases per 100K*
7-Day average new positive cases per 100K residents with a 7-day lag

Case rate will be determined using confirmed (by PCR) cases, and will not include state and federal inmate cases. Case rates include an adjustment factor for counties that are testing above the state average. The incidence is adjusted downwards in a graduated fashion, with a maximum adjustment at twice the State average testing rate.

*Positivity Rate*
7-day average of positive lab-confirmed COVID-19 cases divided by total tests with conclusive results with a 7-day lag.
